EDUCATION

Indian Institute of Information Technology (IIIT) Kota

Rajasthan, India

Bachelor of Technology (B.Tech) – Computer Science Engineering (CSE)

Expected June 2029

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Database Management Systems (DBMS), Computer Networks, Software Engineering.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, C

Core CS: Data Structures & Algorithms (C++), Object-Oriented Programming, Problem Solving

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend & APIs: Node.js, FastAPI, RESTful API Design

Databases: MongoDB, MySQL, SQLite

Cloud & DevOps: Google Cloud Platform (GCP), Vercel, Render, Git, GitHub

AI & Emerging Tech: Generative AI, Prompt Engineering, AI Agents, LLM Applications

TECHNICAL PROJECTS

Shadow Guard – AI Prompt Injection Detection System

React.js, FastAPI, Python, SQLite

- Architected a full-stack AI security platform with a decoupled React.js frontend and FastAPI backend, designing the API contract and data flow for real-time prompt analysis.
- Built backend detection logic that classifies user prompts for injection attacks and unsafe inputs, applying generative AI techniques to flag manipulative or adversarial patterns before they reach an LLM.
- Implemented a SQLite-backed logging system to persist flagged threats for monitoring, and deployed the application as a split-service architecture (Vercel frontend, Render backend) for independent scaling.

Venture Intel – Agentic AI Startup Research Platform

React.js, JavaScript, AI Agents

- Designed an agentic AI architecture that breaks startup research into discrete agent tasks (data gathering, analysis, summarization) to automate due-diligence workflows end-to-end.
- Integrated third-party APIs to pull company and market data into the agent pipeline, structuring the output into a single research summary per query.
- Built the complete React.js frontend, including an interactive dashboard for visualizing agent-generated insights, and deployed the application on Vercel.

GitHub: github.com/ayush17042007/venture-intel Live Demo: venture-intel-gray.vercel.app

DriftShield – AI-Powered Self-Healing Data Pipeline (In Progress)

Next.js, TypeScript, Tailwind CSS

- Designing the system architecture for an AI-driven data pipeline monitor that detects data drift and surfaces failure points, using Next.js and TypeScript for the dashboard layer.
- Building the monitoring workflow to flag anomalies in incoming data and recommend remediation steps, with the dashboard UI styled in Tailwind CSS for rapid iteration.

LEADERSHIP & EXTRACURRICULAR

TechKnow Council, IIIT Kota – Event Management Junior Executive

- Coordinated technical events end-to-end, managing logistics and collaborating with cross-functional student teams to ensure on-time execution.

Incognito Club, IIIT Kota – Choreographer

- Planned and choreographed performances for campus cultural events, coordinating team practices and contributing to overall event production.

ACHIEVEMENTS & CERTIFICATIONS

- Earned 19+ Google Cloud Skill Badges spanning Generative AI, Cloud Computing, Application Development, Data Engineering, and Infrastructure, including "Develop GenAI Apps with Gemini and Streamlit" and "Prompt Design in Vertex AI."
- Completed hands-on Google Cloud labs covering Cloud Functions, App Engine, API Gateway, Pub/Sub, Cloud Storage, and Cloud Monitoring, demonstrating applied cloud infrastructure proficiency.
